

Pathseeker

Genre: Tower Defence / Roguelike

Target Audience:

The target audience for Pathseeker is for all audiences. The visual and gameplay design is appropriate for any age.

Gameplay and Mechanics:

Pathseeker is a Tower Defence Roguelike, the map is a 2D grid with a randomised start and end point. The player creates the path from start to finish, before defending that path from oncoming waves of enemies. These waves grow in density over time, and enemies become stronger too. Enemies that reach the end of the path will take away the player's lives.

Waves have a gold cutoff timer, so making a path that is incredibly long will result in the player having less income.

You use gold to buy towers to place on the grid to attack the enemies, these towers have three different purchasable upgrades.

Every 10th wave, the player obtains a powerful Relic item enhances your towers in different ways.

Core Features:

- Path creation
- Placeable towers
- Enemies
- Waves
- Upgrades
- Relics

Player Goals:

The player's goal is to defend the exit for as many waves as possible. How they created the path dictates what towers they should use.

Interface:

Lives and Gold in the top left corner, a row of tower icons to select the tower to buy in the bottom left corner. The right edge of the screen has a 'side panel' which displays the relics you have obtained, and if you click on a tower, the side panel allows the player to interact with the tower (upgrading, selling, changing targeting).

Unique Selling Points:

The most unique part of the game is creating your own path, and the relic system. This means that each time you play the game it will be a different experience. You also choose how difficult the game is with the path you create.
