

Team Milestones:

- Milestone 1 **First Walk and Talk:**
 - Path can be made
 - Enemies can go from the start to the end with sufficient pathfinding
 - Towers can be placed and attack enemies
- Milestone 2 **Alpha:**
 - Currency and wave system implemented
 - Towers can be bought when players have enough currency
 - Enemy kills give money
- Milestone 3 **Beta:**
 - Towers have upgrades that can be bought for money
 - Towers have unique abilities and effects to help them stand out from one another
 - Enemies have proper variety
- Milestone 4 **Gold:**
 - Enemy spawning system is implemented
 - Relic system is implemented for greater variety
 - Obstacle system is added to stop paths from being the same each time
 - Placeholder sprites are finished
 - Player experience isn't clunky

Individual Task Allocations:

- **Jesse**
 - Box2d Implementation
 - Collision interaction such as projectiles to make enemies take damage
 - Tower and projectile system
 - Firerate, damage, projectile type, effects, targeting system
 - Effects system for specific projectiles
 - Damage overtime, slow, special interactions(?)
 - Map/Path making system
 - Tiles are a fixed grid that the user can move on
 - Tiles have unique sprites to indicate their status (Path, obstacle, neutral, start/end point)
 - User cant go out of bounds and cant build paths on top of another
- **Cody**
 - Initial concept document
 - Player UI
 - Shop menu
 - Sidepanel for viewing relics, and interacting with towers
 - Selling towers
 - Upgrade menu
 - Towers / Projectiles
 - Upgrade system
 - Relic System
 - Relic Manager class to manage unlocked relics
 - Retroactively applied to already existing towers
 - Sound effects

- Enemy animation
- Game Data classes to import and manage INI data if they need to be changed during runtime
- **Martin**
- Enemy and wave system
- Enemy movement following the drawn path from start to end
- Wave system with escalating enemy counts per wave
- Enemy HP with per-wave scaling, damage and death handling
- Gold economy system
- Currency, kill bounty with per-wave decay, and short-path bonus
- Pay-window timing to balance long paths
- Spend interface (TrySpend / AddGold) for the tower system to use
- Game flow and UI
- Splash screen, instructions overlay, fullscreen mode
- HUD (lives, wave, gold), game over screen and restart system
- Audio and effects
- FMOD audio (background music, wave-start and game-over cues)
- Particle burst effects on enemy events
- Foundational bug fixes (tile init, path pointers, bounds and undo)
- TDD authoring and UML class diagram
